## OVERCOME DENTAL ANXIETY WITH SEDATION DENTISTRY

Do you experience anxiety or fear when it comes to visiting the dentist? If you answered yes, you are not alone! An estimated 93 million Americans have some level of dental fear. For many, dental anxiety and fear are barriers to getting the proper oral care they need for healthy living and a confident smile. Some people are fearful due to traumatic childhood experiences, while others have extensive treatment or sensitive teeth, among other concerns. No matter what is holding you back, relaxing sedation dentistry can help! Dr. Patel offers the sedation dentistry solutions you need to actually enjoy your dental visits and achieve your best smile yet.

## NITROUS OXIDE

A clear, odorless gas, nitrous oxide is inhaled before and during your treatment. It brings a euphoric sense of calm and relaxation and carries no aftereffects once the gas is stopped. Nitrous is ideal for mild dental anxiety or fear.

## ORAL SEDATION

Ideal for more moderate dental anxiety or fear, oral sedation is a prescription sedative pill taken one hour prior to your appointment. The effects are a deeper level of relaxation, and may leave you with little-to-no memory of your procedure. A companion is needed to drive you to and from your visit when using oral sedation.

CREATING LIFELONG SMILES

"I was always scared of going to the dentist until I met Dr Patel. He explained me during the initial consultation that I would need root canal in order to protect my teeth. Which scare me initially but then he introduced me to sedation dentistry. Through sedation I was able to get procedure done without feeling any pain. High Quality of Work with amazing technology "
